PROFILE

I have had a passion for technology and how it can be used to make people's lives easier and more efficient. That's what led me to pursue a career in development. I have worked on a variety of projects ranging from simple websites to complex mobile applications. I am proficient in several programming languages including HTML5, CSS3, Bootstrap, JavaScript, PHP, and React.js, and I am always eager to learn new technologies and techniques to improve my skills.

WORK EXPERIENCE

Smart Wardrobe

Upwork Project

2024

- The "Smart Wardrobe" project can potentially solve real-world problems such as providing convenient virtual try-on experiences, offering fashion suggestions, decreasing return rates, enabling personalization, and facilitating data analytics for retailers.

Hair Studio Management System

Upwork Project

2024

- I spearheaded the development of Hairstudio, a dynamic website with an admin dashboard, using PHP as the primary language.
- This innovative platform seamlessly connects users with skilled stylists, showcases trending hairstyles, and simplifies appointment bookings.

Fast Move (Mobile Application)

Final Year Project

2021-2023

- React Native based mobile application with backend in PHP. The app is designed to help user book public bus transport from their mobile phones.
- The prominent point of this app was that it was on the basis of a tracking system, a report automatically submitted to admin after a specific interval of time.

Pharmacy Management System

Semester Project

2020-2021

- PHP project with an admin panel at the backend to control small pharmacy store.
- This web-based application offers a range of features to efficiently manage various aspects of the pharmacy's daily activities.
